Why choose Isotonix Vision?

Isotonix Vision with Lutein is an isotonic-capable dietary supplement, combining vitamins and minerals with lutein, quercetin, zeaxanthin and bilberry, designed to help maintain healthy eyesight. It also helps maintain skin membranes and immune function, and helps in the development and maintenance of night vision. Maintaining vision health is vital, especially during the aging process. Promoting visual health can be accomplished through a healthy diet, exercise and the right supplementation.

The Isotonix Advantage!

Isotonix dietary supplements are delivered in an isotonic solution. This means that the body has less work to do in obtaining maximum absorption. Isotonic products allow nutrients to pass directly into the small intestine and be rapidly absorbed into the bloodstream. With Isotonix, little nutritive value is lost, making the absorption of nutrients highly efficient while delivering maximum results.

Isotonix products also offer the fastest and most efficient delivery system of all nutraceutical supplements and are formulated using only the most advanced and scientifically proven ingredients. Isotonix products are completely free of binders and fillers common in traditional tablet and capsule products so you know that you are getting only the quality ingredients you expect.

FAQs

How is the Isotonix Vision with Lutein different from other vision formulas?

Isotonix Vision with Lutein contains essential vitamins and minerals that contribute to overall vision health. Additionally, it is isotonic form, which contributes to maximum absorption by the body.

What studies have been done to show that the ingredients in Isotonix Vision with Lutein are effective?

Studies show that the carotenoids: lutein, zeaxanthin and B-C will help support eye health. According to the results of a US government study led in part by researchers at Johns Hopkin's Wilmer Eye Institute, if those who were at risk for vision degradation chose to use daily supplements of vitamins and zinc, the risk of vision loss for more than 300,000 people could be avoided over the next five years.
