FORMULA BY ISOTONIX (30 SERVINGS);
ISOTONIX CALCIUM PLUS (90 SERVINGS); AND
ISOTONIX VITAMIN K2 WITH D3 (30 SERVINGS)

Why choose Isotonix Bone & Joint Health Kit?

As humans age, we notice changes in our mobility and flexibility. These changes are largely dependent upon the conditions of our bones and joints. By our mid-30s, we are already losing bone density and, over time, bones can become increasingly brittle and prone to breaks.

To help promote optimal bone and joint health, we have combined three products: Prime Joint Support Formula by Isotonix, Isotonix Calcium Plus, and Isotonix Vitamin K2 with D3 to create the Isotonix Bone & Joint Health Kit. By purchasing the Isotonix Bone and Joint Health Kit instead of buying these products individually, you are equipping yourself with three specially-formulated, Isotonix supplements that work together to support healthy bones, and maintain healthy cartilage and joints.

Prime Joint Support Formula by Isotonix contains glucosamine, a naturally-occurring compound produced in healthy cartilage by the body and a key component of synovial fluid. In addition to glucosamine, Prime Joint Support Formula by Isotonix also contains the powerful antioxidant Pycnogenol, which inhibits the body's over-active inflammatory processes associated with the normal aging process. Furthermore, Prime Joint Support Formula is the only product on the market delivering glucosamine and Pycnogenol in isotonic form.

Calcium is essential for building and maintaining strong bones. Isotonix Calcium Plus provides the body with an advanced, cost-effective and generous 750 mg dose of calcium through an optimized blend of calcium, vitamin D3, magnesium, vitamin C and boron. Vitamin D3 acts to stimulate the production of calcium binding and transport proteins that help move calcium across cell membranes and store the mineral inside the cells.

Isotonix Vitamin K2 with D3 contains vitamin K2, a form of vitamin K which supports vascular health and calcium utilization, along with vitamin D3, the metabolically active form of vitamin D. Vitamin K supports the normal delivery of calcium to the bones, while vitamin D plays an important role in bone health, working with vitamin K to support normal absorption of calcium. Isotonix Vitamin K2 with D3 is the first of its kind to deliver both of these powerful vitamins with isotonic delivery.
